

2-Inch Hitch Receiver Installation Guide

Thank you for purchasing the Mount-n-Lock™ 2-Inch Hitch Receiver. This guide will walk you through the steps needed to securely install it on your Mount-n-Lock™ Camper & RV Bumper.

Tools: You will need the following tools to accomplish this installation: 9/16" wrench, torque wrench with 9/16" socket, crowbar, and standard 5/8" hitch pin.

Step 1: Attach nylon fasteners to faceplate. Nuts act as spacers, so note orientation.

Step 2: Hang faceplate on bumper at location you desire (short bumper segment used in images for demonstration purposes).

Step 3: Hang flanged channel from rear lip of bumper so that it aligns with faceplate.

Step 4: Insert hitch pin into flanged channel.

Step 5: Swing faceplate out slightly and swing flanged channel up until almost tight to bottom side of bumper.

2-Inch Hitch Receiver Installation Guide

Step 6: Insert crowbar through square opening in faceplate and under hitch pin inserted earlier into the flanged channel. Let faceplate fall against channel's flange and gently pry up.

Step 7: With channel's flange nested atop the faceplate's lower lip, remove crowbar and insert 3/8" x 1" bolts as shown.

Step 8: Use torque wrench to tighten bolts to 44 ft. lbs. of torque. Your Mount-n-Lock™ 2-Inch Hitch Receiver is now ready to use!

Last Step: Your Mount-n-Lock™ 2-Inch Hitch Receiver includes at no additional charge a saddle clamp which can be used to reduce the rattle of your hitch accessories. The following cut-away view of just the flanged channel and the saddle clamp shows how the saddle clamp is installed once your hitch accessory is in the hitch receiver.

ALL FINISHED!

If you encountered any problems or have questions along the way, please feel free to contact us at info@mount-n-lock.com or 540-324-9117 for assistance. Thanks for your order!
